Node.js
SQL
Git
python
jenkins

Experience

BasketHunt Pvt Ltd-web developer intern
2022 - 2022
written clean & responsive codes and developed websites improved frontend and backend.

Amdocs-Software engineer
2023 - Present
I play a pivotal role in ensuring the robustness and reliability of APIbased solutions. My primary responsibility revolves around crafting and executing Python scripts to thoroughly validate the responses generated by the APIs.

Projects

Qpaperz
This website has a great UI which is used to download the previous years question papers of Bharati Vidyapeeth university college of engineering Technologies used HTML to layout webpag CSS for designing the webpage Bootstrap to use previously designed layouts

Weather forecast
In this project express.js ejs and nodemon is used. On entering the location this website fetches temperature description of the climate and an icon related to weather using an API. And time at which temperature is measured is generated using javascript.

Credit card defaulter prediction
I collaborated with a team to create a Credit Card Defaulter prediction using Machine Learning. With my expertise in web development I played a key role in designing frontend of website while also contributing to the development of the machine learning algorithm.

Achievements

Successfully led the Information Technology team at my college as the Publicity Team Leader, improved communication and teamwork skills. As a result, I honed my skills and was able to demonstrate my ability to work in a team environment.
